

Dystonia, a short film

Dystonia is a proof of concept film for the feature film script Life and Music written by Peter at CWC FILMS in Australia. A beautiful and powerful true story about how dystonia changes lives.

Dystonia occurs more as people age, so it may well be relevant for our ageing population to learn about this. The types of dystonia that are more common in older age are in the neck, hands, face and voice.

The film is available in two formats, one with subtitles, and one without. They are freely available for viewing on Youtube.
